

Edit Interactions:

- ⇒ If we put any visual in the report view and we want that in the next 3 visuals which are already there, they must be effected according by my choice. so I will use edit interactions.

Steps ⇒ Select the visual → Format tab → Click the edit interactions

Now, In each of the visuals the filter, highlights, None option will come. so I can choose the effect according to my choice.

New Card:

- ⇒ It fills the purpose of single and Multiple Card both.
- ⇒ Under it, I can insert the images and gives the reference, ^{table} level also which I cant do in single Cards in multirous cards,
- ⇒ I can compare two values in a single card with the help of reference table.

Example ⇒ Suppose If I insert a ^{new} card and insert the sales, quantity Discount, Now I want to work on values action. I will go on callout, and inserting the images I will go on image area.

Now my task is to compare the sales with profit so, in visual I go to reference table. There in cards I select 2 sales, and I dragged summation (Σ Profit) in add label.

Now, If I want any editing in profit then I go to reference label layout.

If I want that profit value between minimum to 5 lakhs in red colour, 5 lakhs to 10 lakhs in yellow colour and 10 lakhs to max in green colour. I have to do conditional formatting.

Go to reference label $\rightarrow$ Good ^(Sum of Sales) $\rightarrow$ Values $\rightarrow$ Colour $\rightarrow$
Click on effects and in format style "select the rules."

* What field should be we based this on?

$\rightarrow$ "Sum of profit"

Drill down

By clicking at any data point we can do the detail Analysis of it.

Example $\rightarrow$ I taken clustered column chart with respect to sum of sales and order date / year.

$\rightarrow$ My order year must have hierarchy (Year $\gg$ Quarter $\gg$ Months $\gg$ Day)

$\rightarrow$ Then only drill mode will work I will click drill mode

$\rightarrow$ So a drill arrow $\downarrow$ with black circle comes now if I click 2014 then it shows Quarter for 2014 only.

Now, if I click Quarter 2 then it shows Months for 2014, Quarter 2 only as it continues till dates.

Types of filter in Power BI :-

⇒ Three types

- (I) Filters on the visual
- (II) Filters on this page
- (III) Filters on all pages (Report)

- Filters on the visual :- It will work when we select any visual
- Filters on this page :- It work for whole page.
- Filters on all pages :- It works for all pages (back and forth).
