

Measure DAX

Home → New measure

- (I) Customer Count = Count A (Indian-data, customer [Name])
- (II) Unique Customer Count = Distinct count (India data customer [Name])
- (III) Duplicate customer count = [Count of Customer name] - [unique customer name]
- (IV) Total Sales = Sum (India-data [Sales])
- (V) Karnataka Sales = Sum X (filter (India data, India-data [State] = "Karnataka"), India-data [Sales])
- (VI) Karnataka Sales = Max X [Previous]
- (VII) Same for min, avg, count X
- (VIII) Karnataka count = Count X (earlier, India-data [States])
- (IX) Region north & Category office supplies = Sum X (Calculate table (India-data, India-data [Region] = "north", India-data [category] = "office supplies"), India-data [Sales])

* Telangana Sales = Calculate ([Total Sales]), keep filter.
(India-data [State] = "Telangana")

→ UP Sales = [UP Sales] / [Total Sales]

→ If we want the sales which will not be affected by the filters.

Fixed Sales = Calculate ([Total Sales], All (India-data))

→ Now If I want that the Fixed Sales will be affected by Region slicer & with other is unaffected.

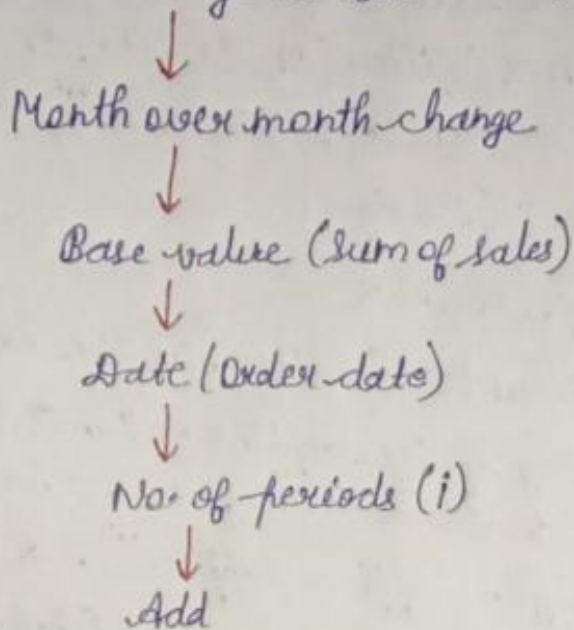

→ Region sales = CALCULATE ([Total Sales], All except (India-data, India-data [Region]))

→ REMOVE DAX

REMOVE DAX = CALCULATE ([Total Sales], Remove filters (India-data (Region)))

Quick Measure

- It is a pre-defined formula.
- Approx 20+ formulas exist under it.
- In time intelligence dax →

Example :

→ Take a table → Year → Month → Sales → Month.

* Now we will see the changes month wise.

* Now I want the normal dates not the hierarchy.

Table → Order date → Drop down → Order dates
→ Sales

Publish the report in the Power BI

- In the report page at the corner publish option is there from which we can publish the files in Power BI Services.

When we upload so there is a folder my workspace which comes in which we upload this folder (ones with one person (S) sign it means we can access this folder only if another person wants to access our folder then we create new workspace in it will come with multi-person (SS) sign comes.

When I upload a single file that time two files are visible, one is report (visuals) and another is semantic model (dataset). we can create dashboard also there click on any visual and select pin (P) option.

After the creating a dashboard it will also be visible in my workspace. And suppose if I want to do any change in any visual then just click on the visual and click on edit it will open the data pane and visualization pane there only.
