

RLS (Row Level Security)

→ It allows me to control the access of the data with the user.
Example → I have taken a tree map Σ sales by country. Now I want that my user should see only Germany country data then

Modelling → Manage rules → Untitled (name) → select the tables in the tables
→ Rules (+New)

{ Column = Country, value = Germany }

Now save and OK.

Now, In the modelling → view as → Germany data → OK
Now only Germany country data is visible to stop it click on stop viewing.

⇒ If I go to table view during RLS then, I find the data RLS related to Germany country only.

Page Index Button / Page Navigation

⇒ It helps me to create the Index Page under the Index Page if I control + click on any page, under my power BI report.

Insert Button → Navigator → Page Navigator

Case ⇒ Now, with the help of page navigator, I have gone to any page from the index page.

But now if I want to come back to the index page then we use page navigator button.

Page navigator button

⇒ If I want to reach the Index Page from any page. Then,

Insert → Button → Blank (Index page button)

Click on this button → Action → On type (Page navigation)
→ Destination (Index page)

⇒ Now, if I want this button on the other pages also so simply copy and paste in other page.

@ If we lost any any by default visual then what to do?
Visualization pane → : → restore default visuals
