

## Sync Slicer

- It is used to attach a slicer of one page with the other pages also.
- If I take any slicer on the page then it works on that page only, but I want slicer which will work for all pages or the pages that I want so I will use sync slicer.

Example → Take a slicer → Select Category  
This slicer works for a particular page but I want to apply it on all the pages.

Steps → Select the slicer → View tab → Sync slicer →  
Add and sync with all pages.

In the slicer two options are visible sync and visible (eye)  
If I uncheck visible for a specific page, then I cannot view the slicer on that page but it still affects the page.

If I uncheck the sync for any page then that page is no longer remains synced and with other pages.

## Bookmarks

→ It capture the current state of report page.

Example → I have taken <sup>two</sup> clustered bar chart in 1 visual I am showing Top 5 market with respect to sales.

In another clustered bar chart we showing Bottom 5 market with respect to sales.

And we have inserted button

Insert → Button → Blanks

Now, we have 2 buttons top 5 and bottom 5. My task is to, when I click on top 5 button so Top 5 visual, must be visible otherwise the bottom 5 visual must be hidden and vice-versa.

View → Selection → Hide the bottom 5 visual.

Click on bookmark in view tab → add → name it as top 5.

Do as it is for bottom 5 visual also.

Click on top 5 button → Action (on) → Type (Bookmark)  
→ Bookmark (Top 5)

Do as it is for bottom 5 button also.
